

4. (Amended) The composite material according to claim 1, wherein the weight ratio of the aggregate component and the fine particle component is (aggregate component/ fine particle component) = 1/10 to 10/1.

5. (Amended) The composite material according to claim 1, wherein the organic component is contained by 40% by weight or less with respect to the total amount.

6. (Amended) The composite material according to claim 1, wherein the main component of the organic component is a curing type resin.

7. (Amended) The composite material according to claim 6, wherein the main component resin of the organic component is a methacrylic based resin.

8. (Amended) The composite material according to claim 6, wherein a plasticizer is contained as the organic component.

9. (Amended) The composite material according to claim 1, wherein the resin component is contained by 6 to 15% by weight with respect to the total amount.

10. (Amended) The composite material according to claim 1, wherein a transparent component is contained at least as a part of the aggregate component.

11. (Amended) The composite material according to claim 1, wherein a transparent component with the surface covered with a pigment component is contained at least as a part of the aggregate component.

12. (Amended) The composite material according to claim 1, wherein a luminous material or a fluorescent material is contained.

13. (Amended) The composite material according to claim 1, wherein a flame retarder is contained.

14. (Amended) The composite material according to claim 1, wherein a pigment for coloring is contained in the organic component.

15. (Amended) The composite material according to claim 1, wherein an antibacterial agent is contained.

16. (Amended) The composite material according to claim 1, wherein the surface of a compact is treated by polishing, a water jet process, or a water jet process after polishing.

17. (Amended) The composite material according to claim 1, wherein the main component of the organic component is the methacrylic based resin, to be cured by a combination of a polymethacrylate and at least one selected from the group consisting of a methacrylate monomer, and an acrylate monomer.

18. (Amended) The composite material according to claim 1, wherein the polymethacrylate is a polymethyl methacrylate (PMMA), the methacrylate monomer and the acrylate monomer is one selected from the group consisting of a methyl methacrylate, an ethylhexyl methacrylate, and an ethylhexyl acrylate.

19. (Amended) The composite material according to claim 1, wherein a force needed for a bending process of a platy body having a 3 to 15 mm thickness is 1 kgf/cm² or less.
